was only by means of galvanism that this fact. He had also found that his object could be accomplished, and when the operator was is suited from directed all his energies to the construction of a battery of constant, glass, the rod would not work, provequal and moderate power.

After trying nearly every kind of the red was fine to the critical of elec-battery in use, he had almost begun to tricity. The instances parameters the despair, when, by accident, he learned gentleman in which his theory had that a constant battery of mederate been horne out by the facts were nupower had been constructed in Engmerous and extremely interesting. In ing the bidd and by pirning a plate of size and a one case he had discovered a subterand said; plate of copper in an ordinary flower ranean lake only a few feet below the

one. After various modifications, he well was ferty feet deep and ten feet succeeded in adapting it to his purpose wide, but at that depth a rock had and had the satisfaction, after nearly feurteen years of almost constant experiment, of seeing his labers crowned with success, and producing from elements a substance similar in all re- above the surface. In another case he

Now came the exciting period of his labors, to see whether this artificially formed egg could be hatched by heat. He placed it in his hatching even, and watched it through a glass door all latimer was convinced time; the sub-

tieth day after placing his egg in the even, a small hole was observed in one side of it, and shortly after the bill of a bird was thrust through. The Professor was almost wild with delight, and several times was on the point of breaking the egg to see What kind of a bird he was going to have. He restrained himself however, and next agent known as electricity, which person was almost through. The scientific world has only a very slight knowledge of the wonderful law bounds this tiger."

If you are some one who is a showman?"

"Well, I'll tell you," said the purchaser. "My wife died about three weeks ago. We had lived together for ten years, and—and I miss her." He paused to wipe his eyes and steady his voice, and then added: "So I have bought this tiger." strained himself, however, and next agent known as electricity, which permorning had the satisfaction of finding in the receiver a live bird, of some ally gives a glimpse of its power in unknown species, perfect in its anate- the death-dealing thunder-bolt or the my, but strange to say, entirely with-out feathers! Saming surors, and in this direction an immense field is open to the inves-

"This most astonishing result," remarks the paper from which we quote "has almost upset our previous notions of natural philosophy and the governing laws of animal organism.

As we gazed upon the fertheriese bird hopping about and feeding upon the seeds given it, we began to doubt the maxim would be verified: "Touth is might and mill prevail." reality of our own existence, or that of mighty, and will prevail." anything about us!"

The Professor, urged on by his onecess, has set about another analysis,
